HUNTINGTON'S

DEPENDABLE

Perennial and Biennial Seeds

IT IS our purpose in presenting this complete list of seeds to give to the flower lover some of the rarer and more choice varieties not ordinarily found in the average seed catalogue.

Every year we add to our list—choosing from every available source where distinct and worthwhile novelties are to be found. We feel confident that you will find many items here that will give you much pleasure and satisfaction.

"We are growers of flower seeds—not manufacturers." This is significant. Because of climatic conditions the perennial seed crop is very uncertain. It will facilitate matters considerably if you will kindly add second and third choice. We do not substitute, and by your adding extra items, it assures you of a hundred percent order.

GERMINATION

There are many causes for the failure of perennial seeds to germinate. Weather conditions, soil conditions and other reasons vary the percent of germination. Experienced nurserymen sometimes are forced to make a second sowing. For this reason we cannot guarantee germination except under an approved test. We do guarantee fresh and clean seed.

QUANTITIES

Except in new or very scarce items, each packet will contain from 100 to 300 seeds. Trade packets will have three times the number of seeds, and in some cases will contain a thousand seeds. Many of the finer seeds are so rare that we are only able to purchase them by the thousand seeds. These we must packet accordingly. Nurserymen and growers will be interested in our quantity prices, by the ounce and pound. Please send in your planting list for quotations.

In this list of Delphinium we have selected what we consider the best grade of practical hybrid Delphinium. By practical, we mean a satisfactory rate of germination and satisfactory bloom without paying exorbitant prices for the seed. No hybrid seed will come absolutely true, and in these varieties which we list below, you will find the best types of single and double Delphinium that can be procured. The quality of the bloom is unequalled, and the plants are especially hardy for hybrids.

We would recommend that they be sown where they can be protected, and should not be sown too late in the summer. Early Spring, after all danger of frost is gone, is the ideal time to sow these seeds. Many varieties will bloom the first year.

HOLLYHOCK EXQUISITE IS A FINE NOVELTY

LILIUM

The seeds presented in the following list have been collected in the three sections of the world where lily seed is most extensively grown—the Lakes region and the Pacific coast of the United States, and England. These seeds represent the best and hardiest lilies under cultivation.

- LILIUM Regale**—Our stock of this is taken from bulbs that are held expressly for seed production, and will give the very best results, both in germination and vitality. We plant in frames in early May. Seed germinates in about two weeks. Let the little plants stand until fall, when the bulbs should be lifted and stored in dry sand in a cool place, free from frost, and then planted out again in May. The second fall lift the bulbs and plant about 3" deep in a permanent situation. 1-4 oz. \$1.00 15 .35

PANSY

The producing of Pansy seed is becoming more and more specialized. Realizing this we have procured the best that is grown in Europe and Oregon, and we highly recommend the varieties listed below. We feel confident they will be entirely satisfactory, giving extra large flowers of marvelous hues.
 For Spring blooming sow in mid-August in cold frames. Transplant to three inches each way, and give slight protection through the winter. Within the past two years plants from our Pansy seed have won prizes in different parts of the world. Our special Oregon Pansies took prizes in Australia at the leading shows, and in this country we have been successful in scoring victories at important flower shows.

Best Oregon Mixture. Embraces all colors known to the pansy world. True giants. Without doubt the largest and longest stemmed pansies in cultivation. Extra for forcing. 100 seeds 20c; 300 seeds 40c; 1000 seeds \$1.00.

Swiss Giants. (Roggli Giants) This new variety is the result of years of thorough breeding. Immense flat flowers. The mixture shows an excellent range of rare and new attractive colors, salmons, pinks and reds. Packet 30c trade Packet 80c 1-8 oz. \$2.00.

Annuals For Fall Sowing

It is not generally known that many of our best and prettiest annuals may be sown in the fall, and that some of them are even better if fall sown. Among these are Alyssum, Antirrhinum, Calendula, Calliopsis, Candytuft, Centaureas, Cyanea and Imperialis, Clarkia, Dianthus, Escholtzia, Euphorbia, Godetia, Gypsophila, Hunnemannia, Kochia, Larkspur, Marvel of Peru, Didiscus, Linum, Lupinus, Nemophila, Nicotiana, Nigella, Petunia (bedding vars.) Phlox, Drummondii, Poppy, Schizanthus, Verbena. Sweet Peas may also be sown in fall, but personal experience here has shown that our frigid Ohio springs are rather hard on the

seedlings. All the above will be found in splendid variety in our list of annuals.

Plants from Fall sown seeds are hardier, with better root system, and can be transplanted in the cool, wet weather much easier than those from the spring sowings. They will bloom earlier, and blooming season can be greatly lengthened if both fall and spring sowings are made.

NOTICE—Care should be taken not to sow too early, else the seeds will germinate and seedlings will winter kill. Early November is the best time in this section.
